

## ZfD Agent Install Instructions

- 1) *If not already done, install the NW client [default options are fine, since we don't need NDPS anymore].*
  - a) *When prompted, reboot.*
  
- 2) Edit the HOSTS file [c:\windows\system32\drivers\etc\hosts].
  - a) Include the following line at the bottom:  
  

169.229.137.65    ZenWSImport
  
  - b) Save the file, and exit Notepad.
  
- 3) Install the ZenWorks Agent [ARCH1\_OPS:BIN\ZW\_Agent\ZfDAgent.msi].
  - a) Accept the license agreement
  - b) When prompted for the Middle Tier Server Address, supply the IP of ARCH1 [169.229.137.65]
  - c) No other entries needed for the rest of the installation; use the defaults.
  - d) When prompted, reboot, and log back into the workstation.
  
- 4) Upon logging back into the [install] workstation, open ConsoleOne from any system and navigate to ARCH\WORKSTATIONS and confirm that the machine you setup appears in the list.

That's it. Takes about 5 minutes once you get the hang of it; you can do #2 and #3 at the same time. If you skip #2 and reboot after #3 first, you'll either have to reboot again (and login) -- or else run zwsreg to force-register. To register the workstation, you must include the entry in HOSTS, you must have the client, you must have the agent, and you must login to the workstation.
