LUMBER

VARIATIONS
Finished, Rough

DESCRIPTION
Wood boards.

USES
For framing heavy model bases and constructing almost any furniture piece. The variety of dimensions lumber comes in makes it very flexible.

MANUFACTURE
Trees can be harvested from forests or tree farms, which are then stripped and shipped to processing facilities as logs. Logs are cut to dimension in the most efficient way possible, with scrap wood going to various other manufacturing processes. Cut lumber then dries, is sent to a planar to smooth and square surfaces.

NOTABLE INGREDIENTS
Pine, Fur, Spruce

DISPOSAL
Usable scraps to Reuse Stations, unusable scraps to wood dumpster behind shop. Untreated wood will biodegrade without any issue.

SAFETY NOTES
-Lumber should be cut in the shop. Follow all precautions associated with the particular tools used in the shop.
