

Volume 11 - About the Authors

Yuko Aoyama, Ph.D., is an assistant professor in the Department of Geography at the University of Georgia. She received her Ph.D. from the Department of City and Regional Planning at the University of California at Berkeley in 1996. Her dissertation was on the locational dynamics of the Japanese electronics industry. Her research interests include foreign direct investment, industrial networks, and small business policy.

Jumbi Edulbehram is a doctoral candidate in the Department of City and Regional Planning at UC Berkeley. His interests include regional economic development, urbanization in developing countries and environmental planning.

Raphael Fischler is an assistant professor in the School of Urban Planning at McGill University (Montreal, Canada), where he teaches physical planning, urban design and project development. He also does research in planning history and theory. His recent publications include Profiles of Israeli Planners (with John Forester and Deborah Shmueli, Center for Urban and Regional Studies, Technion-Israel Institute of Technology) and "The Metropolitan Dimension of Early Zoning: Revisiting the 1916 New York City Ordinance" (Journal of the American Planning Association, forthcoming).

Kaveh Vessali is a doctoral candidate in the Department of City and Regional Planning at UC Berkeley. He received a Master's degree in Public Policy from Harvard University in 1994. His dissertation research is on the relaxation of time and place requirements for work as enabled by information technologies, and the impacts of this relaxation on household location and activity patterns.

Matthew Zook is a doctoral student in the Department of City and Regional Planning at the University of California at Berkeley. He received a Master's degree in Regional Planning from Cornell University in 1995. His area of concentration is the societal and economic impacts of technological innovation with a particular interest in emerging computer and information technologies. His dissertation research is on the restructuring of regional configurations of high technology production systems.
